1.- RESUMEN DEL DISEÑO DEL ESTUDIO DE ESTABILIDAD

1.A.- ESTABILIDAD ACELERADA

Temperatura: 40°C ± 2°C y Humedad Residual: 75% ± 5%

| Batch Nº | Fecha de fabricación | Fecha de inicio de estudio | Fecha de término | Tipo de Batch |
|----------|----------------------|----------------------------|------------------|---------------|
| BET001 | 09/2005 | 14/09/2005 | 16/09/2008 | Productivo |
| BET002 | 09/2005 | 15/09/2005 | 17/09/2008 | Productivo |
| BET003 | 09/2005 | 15/09/2005 | 17/09/2008 | Productivo |

Tipo y Tamaño de lotes: Lotes Productivos de 300 kilos cada uno.(20.000 tubos x 15 g)

Tipo de material de envase: Tubo de aluminio lacado de 15 g Impreso, de forma cilíndrica, texto impreso

Nombre y país del Manufacturador : Renova Lifesciences Private Limited, NR.SABAR DAIRY, TALOD ROAD, P.O.HAJIPUR, HIMATNAGAR – 383 006, GUJRAT-INDIA

Nombre y país del Laboratorio que desarrolla este estudio de Estabilidad:

Renova Lifesciences Private Limited, NR.SABAR DAIRY, TALOD ROAD, P.O.HAJIPUR, HIMATNAGAR – 383 006, GUJRAT-INDIA

3.- METODOS ANALÍTICOS

Se procede al análisis de las muestras para desarrollo de estudio de estabilidad, en base a la Metodología de análisis de producto terminado incluido en dossier de registro del producto.

4.- ESPECIFICACIONES DE ESTUDIO DE ESTABILIDAD:

Las especificaciones del producto terminado que se consideraron para determinar durante el estudio de estabilidad, se eligieron con el criterio de que son las que realmente reflejarían un eventual deterioro físico-químico del producto.

| Те | est | Especificación | Método |
|--|---------------|--|----------------------|
| Descripción | | Crema blanda de color blanco a blanco opaco | Inspección visual |
| Identificació | n (A) | Cumple según USP | Según USP |
| Control | P. aeruginosa | Debe estar ausente | Según USP |
| microbiológico S.aureus | | Debe estar ausente | Según USP |
| Llenado míni | mo | El peso promedio de 10 tubos no tienen menos de la cantidad declarada en la etiqueta del producto terminado (15 g) y el contenido neto los 10 tubos debe estar entre ± 2% de la cantidad declarada en la etiqueta del producto terminado | Según USP |
| Valoración de Betametasona dipropionato USP equivalente a Betametasona 0,05% p/p | | La crema contiene no menos de 90,0% y no más de 110,0% de la cantidad declarada en la etiqueta del producto terminado. | Según USP |
| Tipo de enva | se | Tubo de aluminio , tapa de polietileno | Inspección visual |

5.- EVALUACION Y ANALISIS DE LOS RESULTADOS:

De acuerdo a los resultados obtenidos en el Estudio de Estabilidad Acelerado (Temperatura $40^{\circ}\text{C} \pm 2^{\circ}\text{ C}$; Humedad relativa $75\% \pm 5\%$) de los cuales se presenta los resultados de los Lotes NºBET001; NºBET002; Nº BET003 a los tiempos inicial, 1, 2, 3 y 6 meses y del Estudio de Estabilidad a Tiempo Real en Condiciones de Temperatura y humedad (Temperatura $30^{\circ}\text{C} \pm 2^{\circ}\text{C}$; Humedad relativa $65\% \pm 5\%$), de los cuales se presentan los puntos 0,3, 6, 9, 12, 18, 24 Y 36 meses, para los Lotes NºBET001; NºBET002; Nº BET003. Se puede verificar que los lotes estudiados no muestran deterioro físico o químico en el envase estudiado (Tubo de aluminio lacado de 15 g Impreso, de forma cilíndrica, texto impreso).

No se evidencia una disminución significativa en la valoración del activo y los parámetros analizados se mantuvieron dentro de los límites especificados.

6.- CONCLUSIONES:

Con los resultados obtenidos permiten proponer, para el producto **BETAMETASONA** crema tópica 0,05 %, un período de eficacia de 36 meses, almacenado en su envase original y bien cerrado, almacenado a una temperatura no mayor a 30° C en un lugar fresco y seco.

En páginas siguientes se adjuntan los informes de Estudios de Estabilidad de los Lotes NºBET001; NºBET002; NºBET003 en condiciones aceleradas, y a temperatura ambiente de 30°C, con los análisis indicados en cada tabla.

Results:

Inferences drawn from tests are listed below. These are based on raw data reports presented in tabular format

i. Physical stability

The physical stability of Betamethasone dipropionate cream 0.05% / 15GM proved to be unchanged after storage up to 24 months at $30^{\circ}\text{C} \pm 2^{\circ}\text{C}$ and $65\% \pm 5\%$ RH and 6 months under accelerated storage condition at $40^{\circ}\pm 2^{\circ}\text{C}$ and $75\% \pm 5\%$ RH.

The results obtained for test item's "appearance" was not changed.

ii. Chemical stability:

Stability under accelerated condition:

Storage for up to 6 months at $40^{\circ} \pm 2^{\circ}$ C and $75\% \pm 5\%$ RH had no significant effect on the chemical stability of the drug product. Betamethasone dipropionate cream have not changed significantly after storage under real time condition compared to initial assay of the batches and are well under Pharmacopoeial Finished Product Specifications.

Stability under real time condition:

Storage for up to 24 months at 30° C \pm 2°C and 65% \pm 5% RH had no significant effect on the chemical stability of the drug product.

The content of Betamethasone dipropionate cream have not changed significantly after storage under real time condition compared to initial assay of the batches and are well under Pharmacopoeial Finished Product Specifications.

Disscussion / Conclusion

During the real time long term stability study all the batches meets the in house specifications all the time.

Hence as on date 36 months stability can be given safely.

As is evident from above studies in Real-time/ Accelerated testing under specified storage conditions, did not cause any significant change in physical/ chemical properties of Betamethasone dipropionate cream. Hence the product is declared to be stable over a period of 36 months when stored under specified conditions.

Shelf life:

Based on the result data the shelf-life has been established for 3 years.

Storage direction:

Store at a temperature not more than 25°, excursion permitted between 15° and 30° (59° and 86° F)
