

Single Use Flow Sensor

For use with SLE ventilators

For use with:
SLE6000, SLE5000, SLE4000

SLE's Single Patient Use Flow Sensor is a very sensitive disposable flow sensor designed for use with neonatal ventilators including the SLE4000, SLE5000 and SLE6000 models.

The hot-wire anemometer design means that it has an almost instant response to the smallest of flows and is ideal for use on very premature neonates.

- ✓ A minimal deadspace of less than 1ml means reduced risk of rebreathing.
- ✓ No need to sterilise means reduced risk of cross-contamination
- ✓ Wide range of flow measurement
- ✓ Reliable, maintenance-free operation
- ✓ High accuracy and repeatability
- ✓ Bidirectional response
- ✓ Fast response time
- ✓ Small and lightweight
- ✓ Saves time setting up ventilators

Technical Specifications

Type: Dual hot-wire anemometer with hot-wire subassembly.

Flow range: 0.2 to 32 l/m

Accuracy: $\pm 8\%$

Deadspace: < 0.8 ml

Weight: 7.5 g

Ordering Details

Part No.	Description
N5302/5	Box of 5 individually wrapped and sterilised single-use flow sensors.
N5302/50	Box of 50 individually wrapped and sterilised single-use flow sensors.
N6656	Blue sensor cable for connecting sensor to SLE4000/SLE5000/SLE6000
