TO WHOM IT MAY CONCERN

I, the undersigned Erika Leemans am a site Compliance Network Member at Pfizer Manufacturing Belgium NV.

An in-use stability study has been performed at Pfizer Manufacturing Belgium NV for **Depo-Medrol 40 MG/ML VIAL** presentation. The start date of the in-use test was 24/10/2011 and the test was performed during 28 days.

Results after 4 weeks of use do not differ too much of the results at time zero (=start of the in-use test) and are still well within limits. Therefore we can conclude that **Depo-Medrol 40 MG/ML VIAL** is stable for 28 days of use.
